The new Neumayer Station(70°39'S, 8°35'W), completed in March 1992, continues these activities. The measurement programme is expanded steadidy and now includes monitoring of the vertical ozone distribution. Neumayer Station consists of two parallel steel tubes, each 90 meters long and 8 meters in diameter, in which containers are inserted to accomodate living quarters, pantry, kitchen, hospital, laboratories, workshop radio operator's room, sanitation, two energy supply stations, and a snow melting plant.
